

# Eclipse Application Programming Interface

## Product

- ▶ Epicor® Eclipse®

## Benefits

- ▶ Integrates with outside applications and applies Eclipse business logic
- ▶ Supports RESTful endpoints through .NET Core technology
- ▶ Helps mitigate the impact of any system changes

## Connecting Your Business to the World

Today's fast-moving business environment requires tighter integration between you, your partners, and your customers than ever before. This tight integration is especially critical for your business systems. To provide the responsiveness you need, your business system must simultaneously talk to other in-house applications, websites, and Internet content.

The Eclipse Application Programming Interface (API) provides a full .NET Core engine that delivers REST endpoints to connect to Eclipse data. The Epicor Eclipse API is a powerful web-services tool that can help connect your business to the world.

The file-level transactions and micro-services are built for purpose to meet the specific needs of distributors. In addition to basic API capability, we provide premium API bundles that provide connectivity to key systems such as sales order management or warehouse integrations.

The sales order transactions can connect to third-party solutions that deliver advanced CRM, Field Service, Rental Operations, and much more. The warehouse API provides endpoints that support connecting warehouse automation equipment to the Eclipse WMS to complete a pick task or stage a tote.

## API Services

The Eclipse API supports get, insert, and update activities for selected components of the Eclipse business logic, including:

The Eclipse API also provides a new middle layer that exposes Eclipse data to other applications in a high-performing stack while protecting the integrity of the Eclipse application by enforcing data validation.
