Alliance Precast Industries Selects Epicor ERP to Support Digital Transformation

Automating and digitizing business processes for greater efficiency and productivity

Epicor Software Corporation, a global provider of [industry-specific enterprise software](#) to promote business growth announced today that [Alliance Precast Industries \(API\)](#) has selected its global enterprise resource planning (ERP) solution, Epicor ERP, to develop greater automation capabilities and enable business growth.

API is based in Kuala Lumpur, Malaysia. The company, which was founded in 1997, is an industry-leading manufacturer in supplying precast reinforced concrete products for Malaysia's infrastructure and building industries. API has achieved remarkable growth and recognition in the industry, with an impressive portfolio of developments including the Kuala Lumpur Convention Centre (KLCC), Kuala Lumpur International Airport 2 (KLIA2) and the Penang International Airport.

“Purposefully built for manufacturers as a single end-to-end business software solution, we are confident Epicor ERP will help our company streamline processes and improve customer responsiveness, making it a perfect fit for our business.”

- API

To meet the demands of such large scale construction projects, API has established six factories across Malaysia. However, the company soon realized that to support continued growth, they needed a new ERP system to enable greater efficiency, productivity, and business process automation.

“Meeting rapidly changing market demands with high-quality products is essential to our success,” said a spokesperson from API. “We needed an ERP system that could reduce waste and minimize errors to improve our speed and efficiency in meeting customer demand. Purposefully built for manufacturers as a single end-to-end business software solution, we are confident Epicor ERP will help our company streamline processes and improve customer responsiveness, making it a perfect fit for our business.”

Without any prior computerized system in place, API's invoicing and sales orders were manual processes, which slowed down employees and created inefficiencies. With Epicor ERP, data from one source will be used to create business documents such as invoices and purchase orders that become part of the automated work processes. Amidst today's enterprise data deluge, this automation is a tremendous business opportunity because it means API will not only have the ability to do more with

the same amount resources, but it will also enable managers to gain improved visibility of the operations and help them make better, faster decisions that supports business growth.

Vincent Tang, regional vice president for Asia at Epicor Software said, “We are very excited to be partnering with API to help them achieve their expansion and future success. Our industry-specific Epicor ERP solution for manufacturers delivers out-of-the-box functionality that closely maps to API’s needs. This gives them the ability to make data and transactions flow efficiently throughout the organization and enhance collaboration, making them fit for greater growth in the future.”

About Epicor Software Corporation

Epicor Software Corporation drives business growth. We provide flexible, industry-specific software designed to fit the precise needs of our manufacturing, distribution, retail, and service industry customers. More than 45 years of experience with our customers’ unique business processes and operational requirements are built into every solution—in the cloud or on premises. With this deep understanding of your industry, Epicor solutions dramatically improve performance and profitability while easing complexity so you can focus on growth.
